

1. Interactive Terminal E-Commerce Cart & Inventory Tracker

The screenshot displays a code editor with a Python script and a terminal window running the application. The code defines a catalog of items with prices and a loop for user interaction. The terminal shows the user adding items to a cart, attempting to add an invalid item, and finally checking out to see a receipt.

```
3 catalog = {}
4     "laptop": 800,
5     "mouse": 20,
6     "keyboard": 50,
7     "monitor": 150 }
8
9 grand_total = 0
10
11 while True:
12     command = input("Enter item to buy(or 'Checkout'/'Exit'): ").lower()
13
```
